# Overview

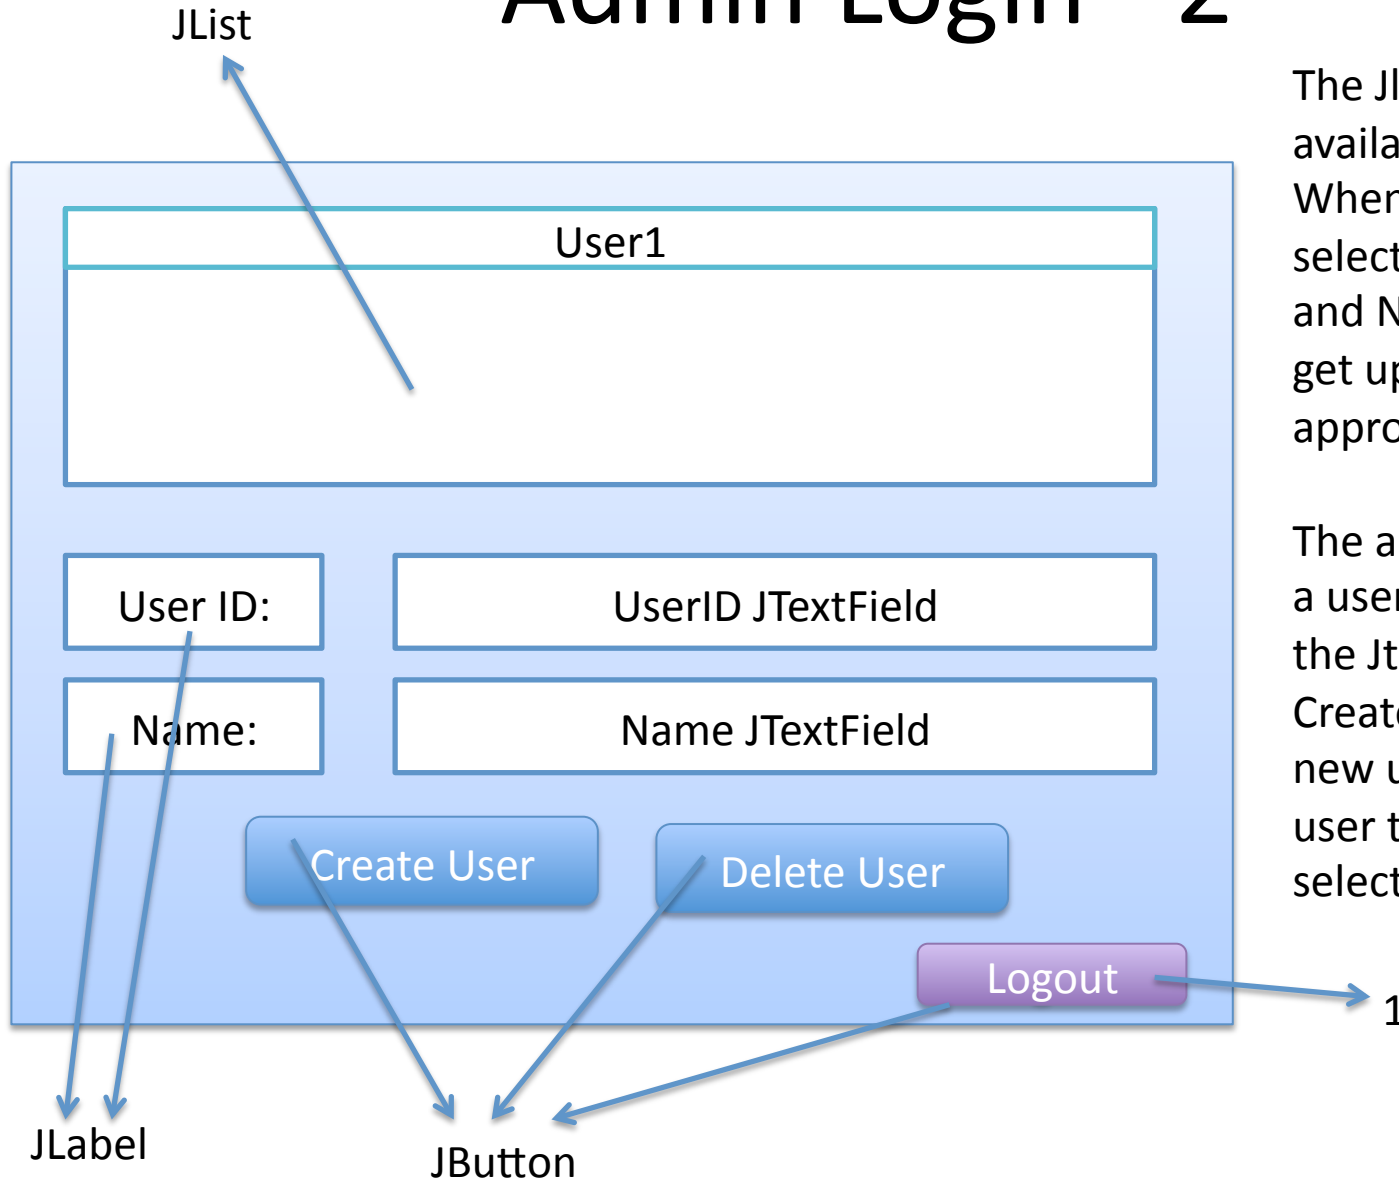

# Login - 1

If an invalid User ID is used an error message will be displayed in the "Error Handler" JLabel. This JLabel will remain invisible until an invalid User ID is used.

The Red arrow indicates an Admin login was initiated.

# Admin Login - 2

The Jlist displays all the available users. Whenever a user is selected, the userID and Name TextFields get updated with the appropriate fields.

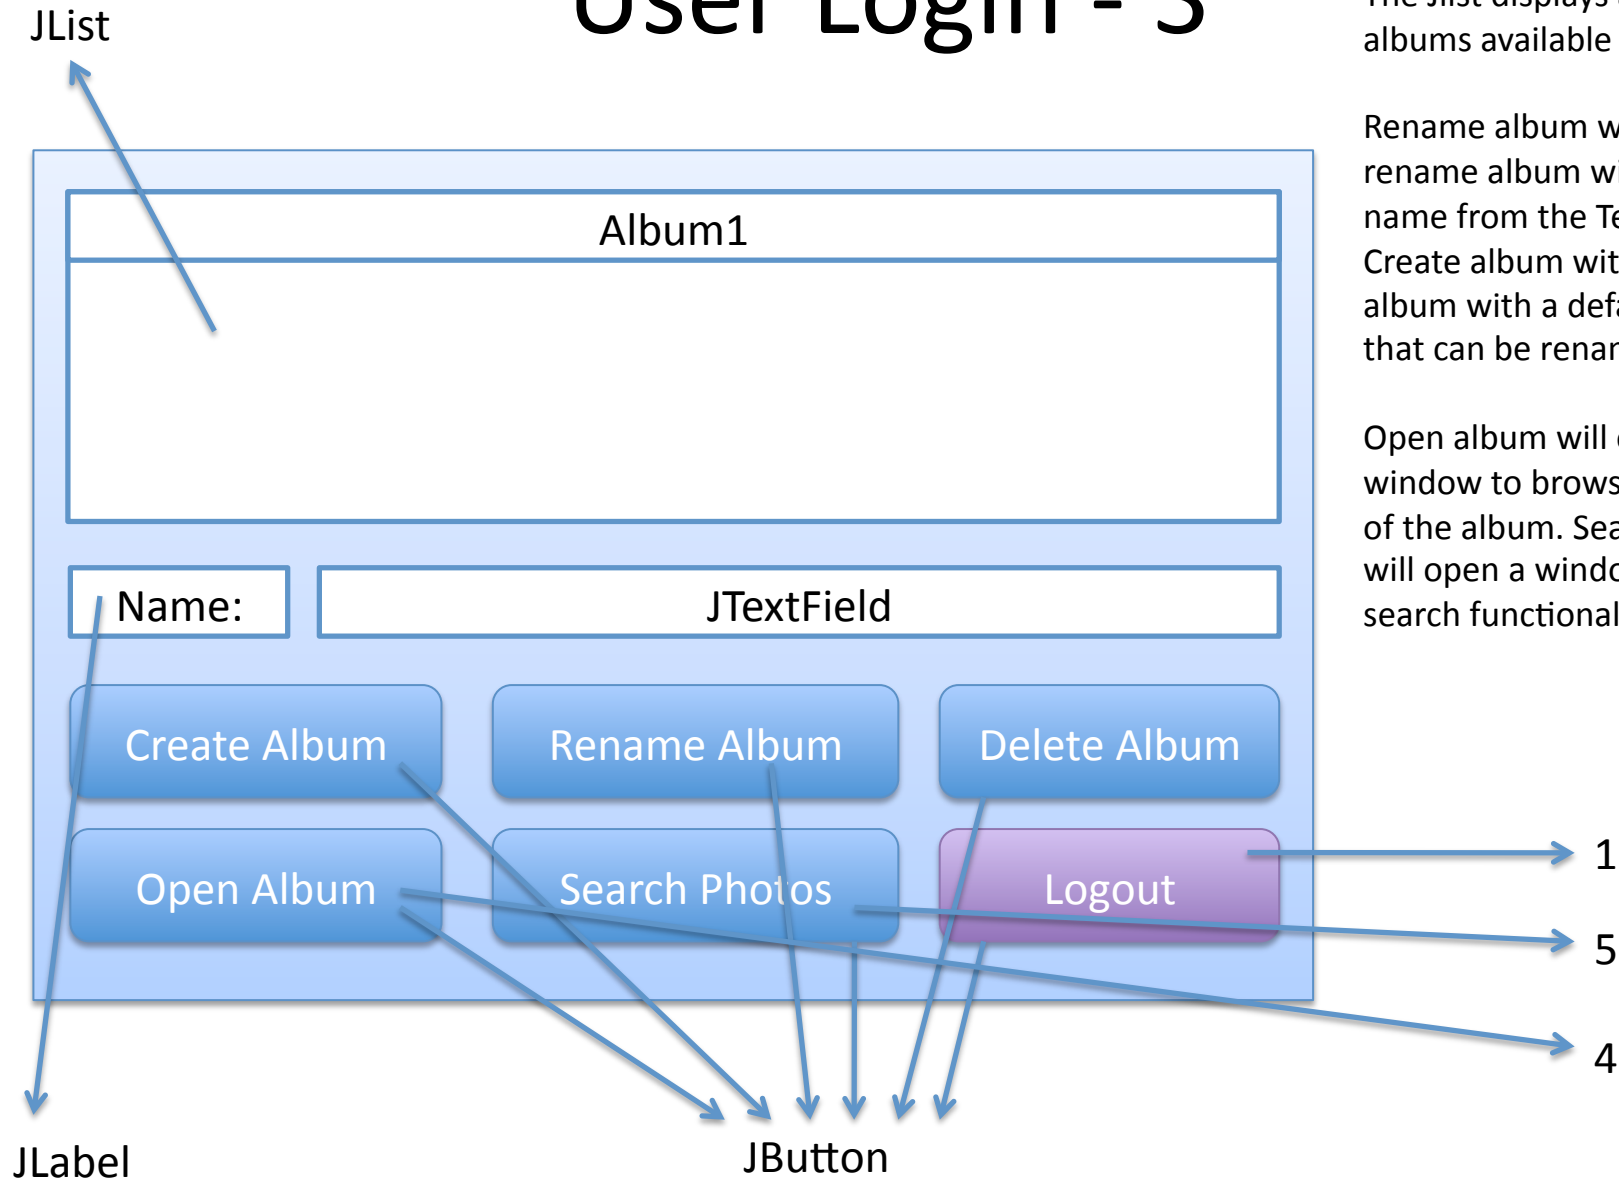

The admin can type in a userID and name into the Jtextfields and Hit Create User to add a new user, or hit Delete user to delete a selected user.

# User Login - 3

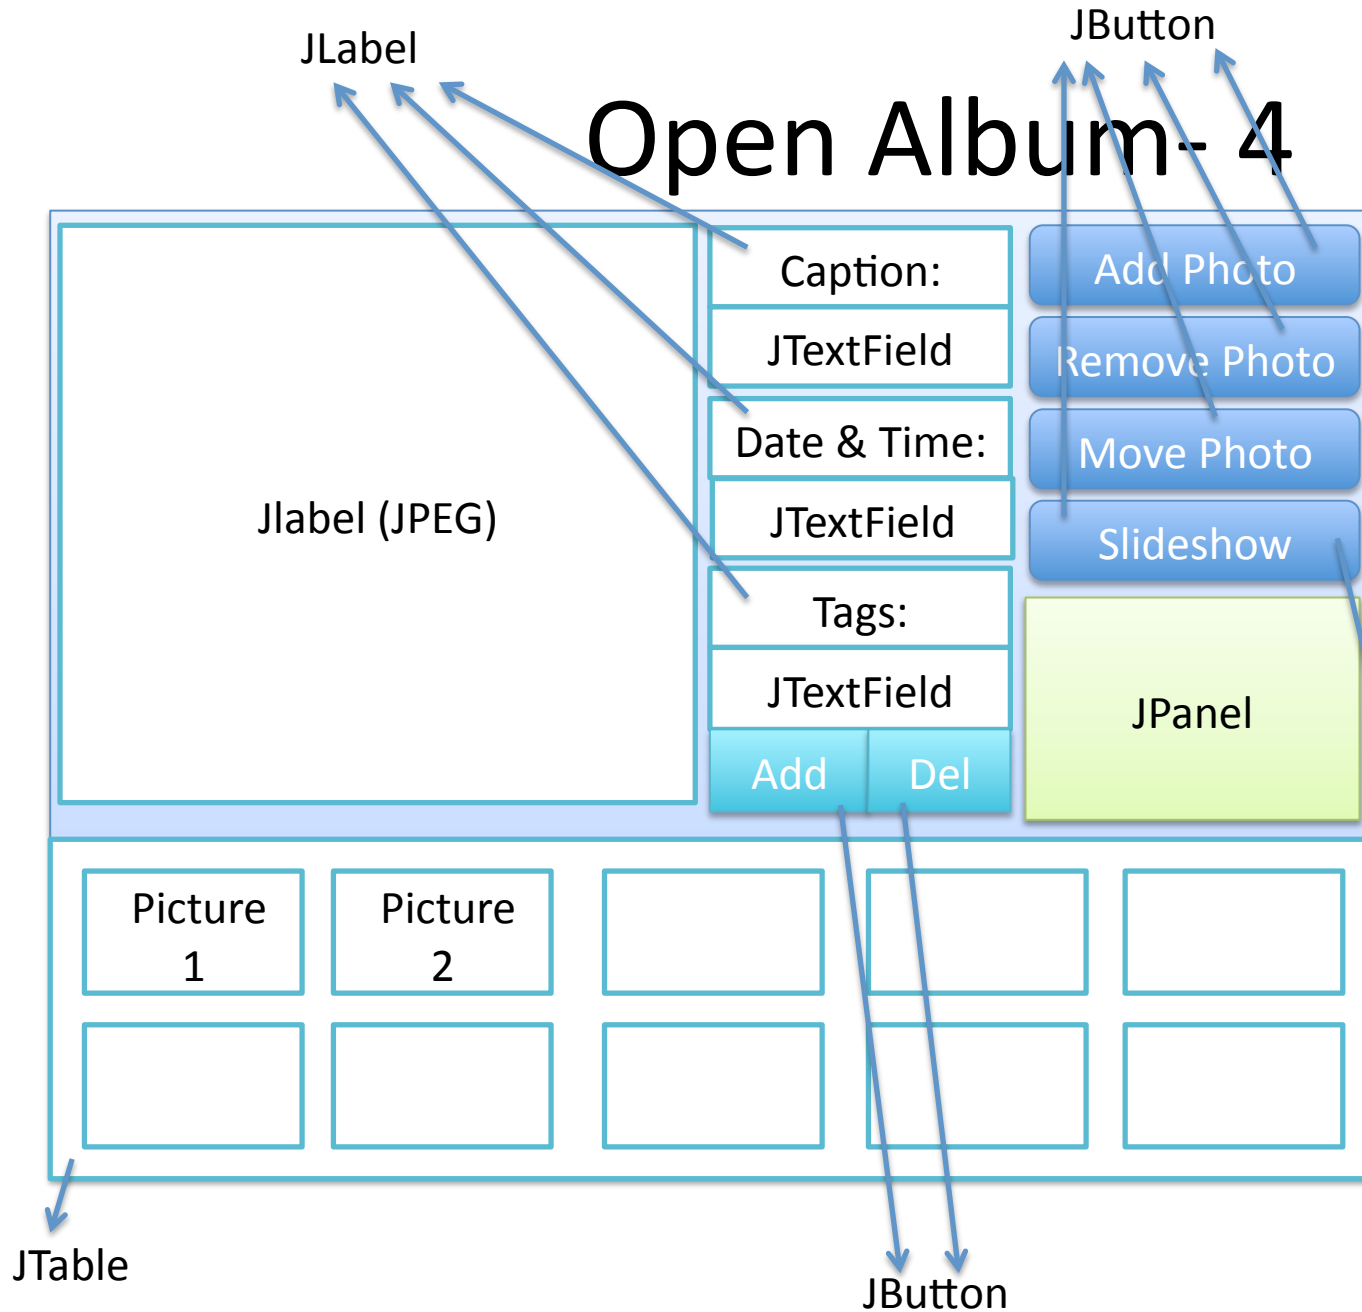

The Jlist displays all the albums available for the user.

Rename album will add a rename album with specified name from the TextField  
Create album with create an album with a default name that can be renamed.

Open album will open a window to browse the photos of the album. Search photos will open a window with the search functionality.

# Open Album- 4

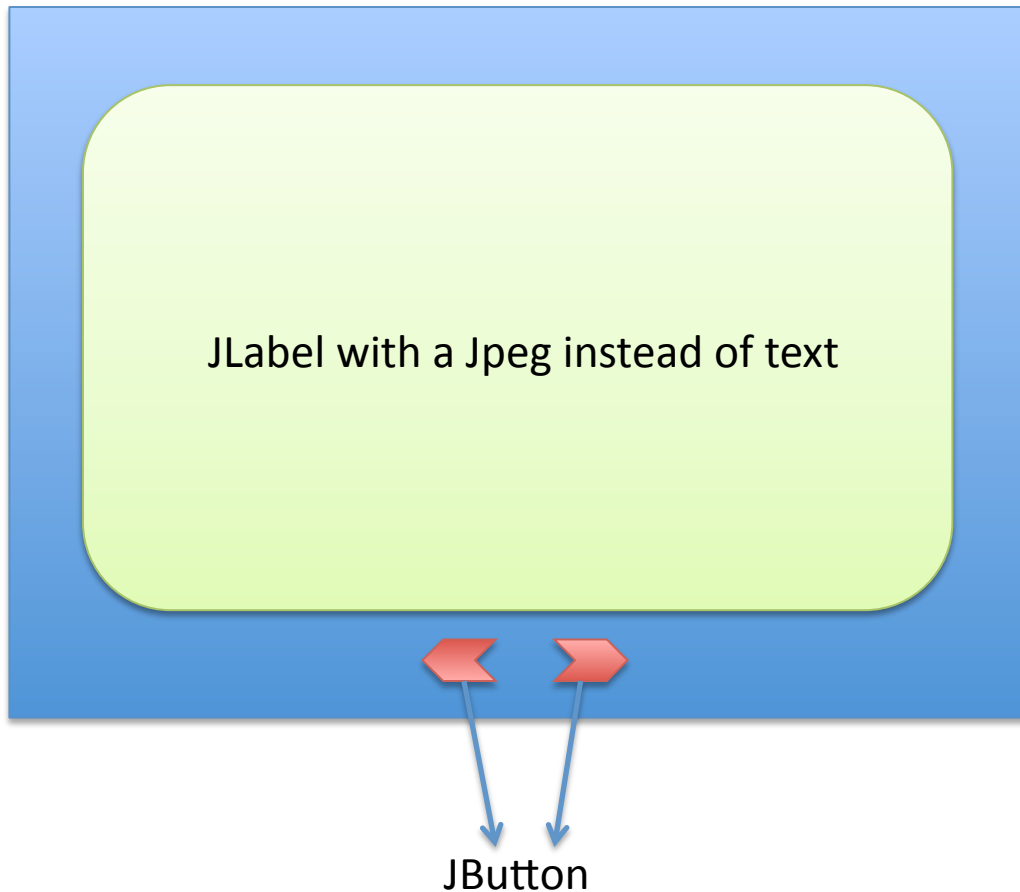

The Green JPanel represents a dynamic area that will display buttons and textfields according to what action event is triggered by which button is clicked.

Slideshow button will go to the slideshow frame.

The Jtable on the bottom will be scrollable and display thumbnails of the photos in my album.

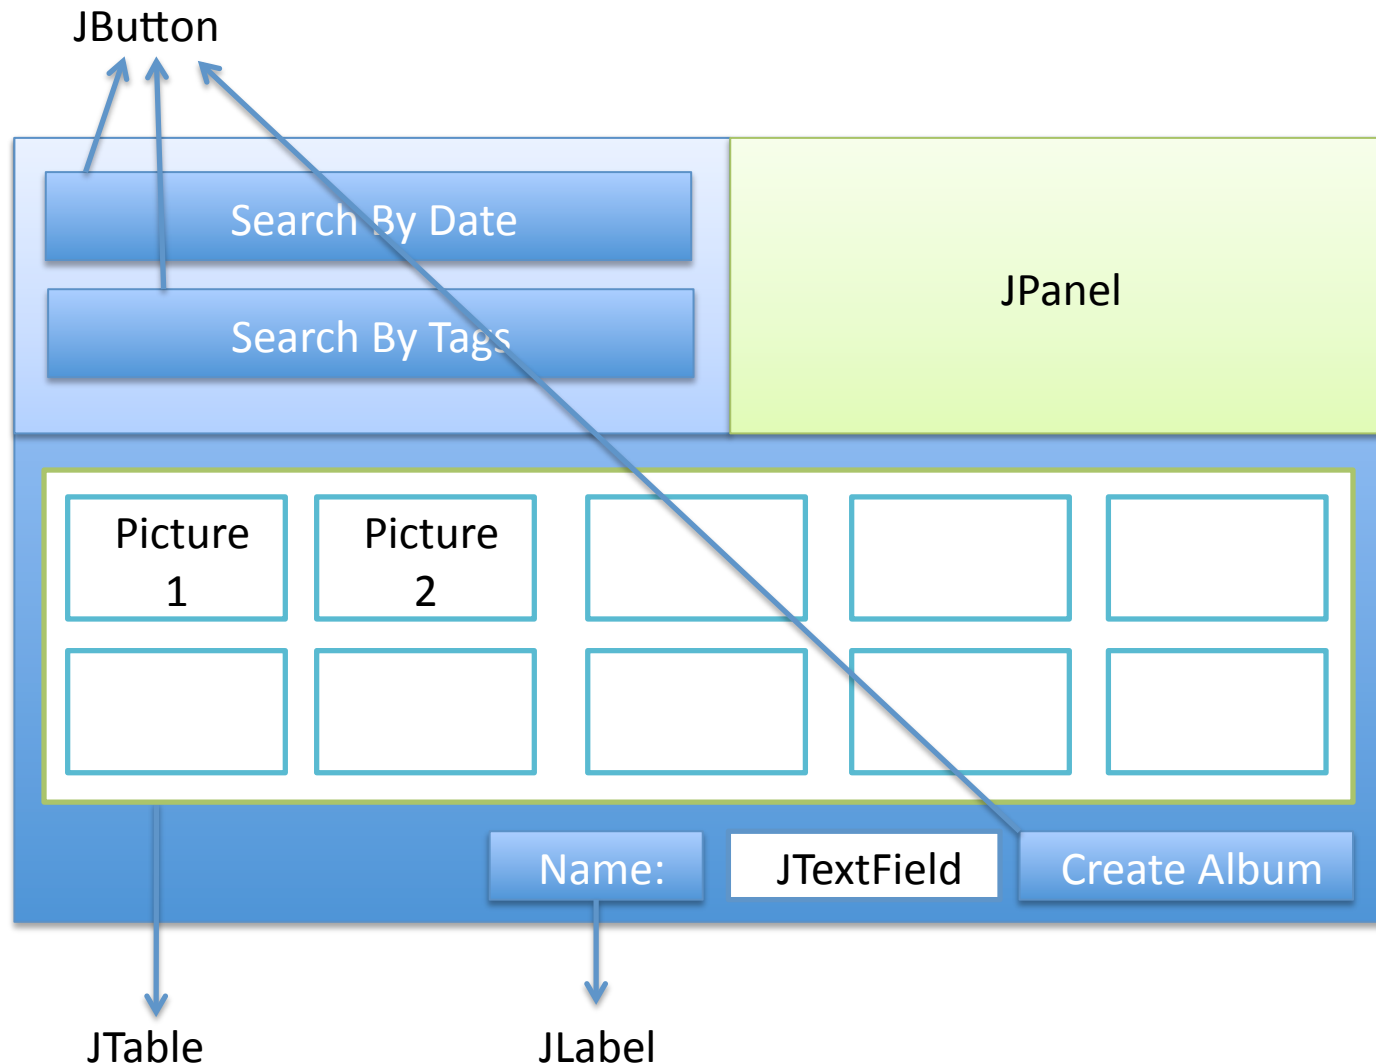

6

# Slideshow - 5

The Slideshow frame contains 3 components: A JLabel that will reassign which image it is showing and the two arrow buttons that will change pictures.

# Search For Photos - 6

The green JPanel is a dynamic panel which will display different components dependant upon which actionevent is invoked by either the "Search By Date" or "Search By Tags" button.
